

# UI prototype

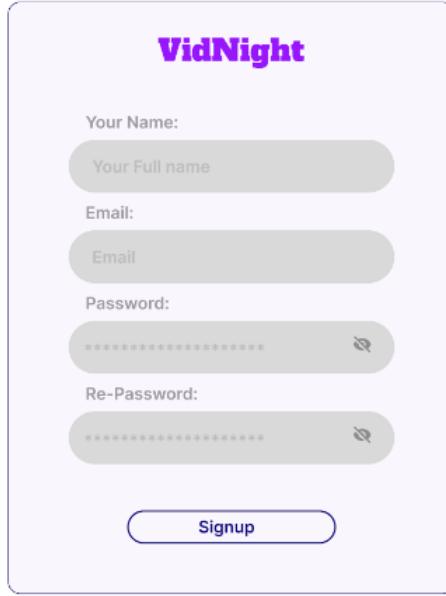

## 1. Login/Sign up

- This is the main screen interface of the website when not logged in. The system will recommend the most popular videos to audiences.

- In the Home interface, when clicking on the Login button (upper right corner of the screen), the system will take you to the login screen as shown above. User fills in the necessary information (username, password) in the corresponding boxes, then clicks Login to return to the homepage. If the user does not have an account on the website, then click Signup to move the system to the account registration interface.

The image shows a screenshot of the VidNight account registration interface. The title "VidNight" is at the top in purple. Below it are four input fields: "Your Name:" with placeholder "Your Full name", "Email:" with placeholder "Email", "Password:" with placeholder "\*\*\*\*\*" and a visibility icon, and "Re-Password:" with placeholder "\*\*\*\*\*" and a visibility icon. At the bottom is a blue "Signup" button.

VidNight

Your Name:  
Your Full name

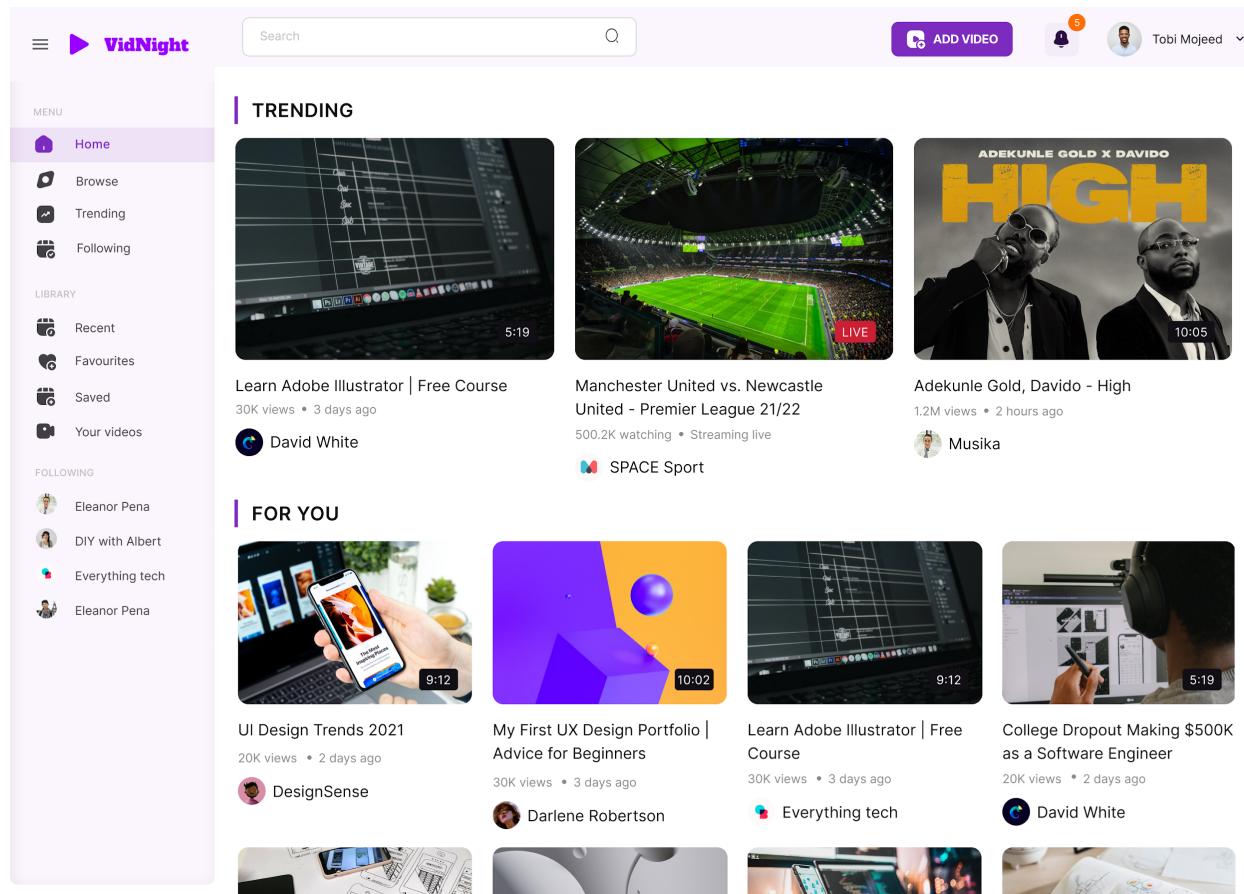

Email:  
Email

Password:  
\*\*\*\*\*

Re-Password:  
\*\*\*\*\*

Signup

- At the account registration interface, enter your name, email, and password for the system to create information for the user. If the email is already used to register, then report the error back to the user.

- This is the interface after logging in, here you can see the screen showing more items people are following. In addition, in the upper right corner of the screen, there is the name and avatar of the user and the Notification icon.

## 2. Video player

The screenshot shows a video player interface for a video titled "UI Design Trends 2021". The main video thumbnail displays a hand holding a smartphone over a laptop screen, which also shows several mobile device screens. Below the thumbnail are playback controls: a progress bar from 3:25 to 10:05, a back button, a play/pause button, a forward button, volume controls, and settings. To the right of the main video area is a sidebar titled "RELATED VIDEOS" containing five video thumbnails with titles, view counts, and upload dates:

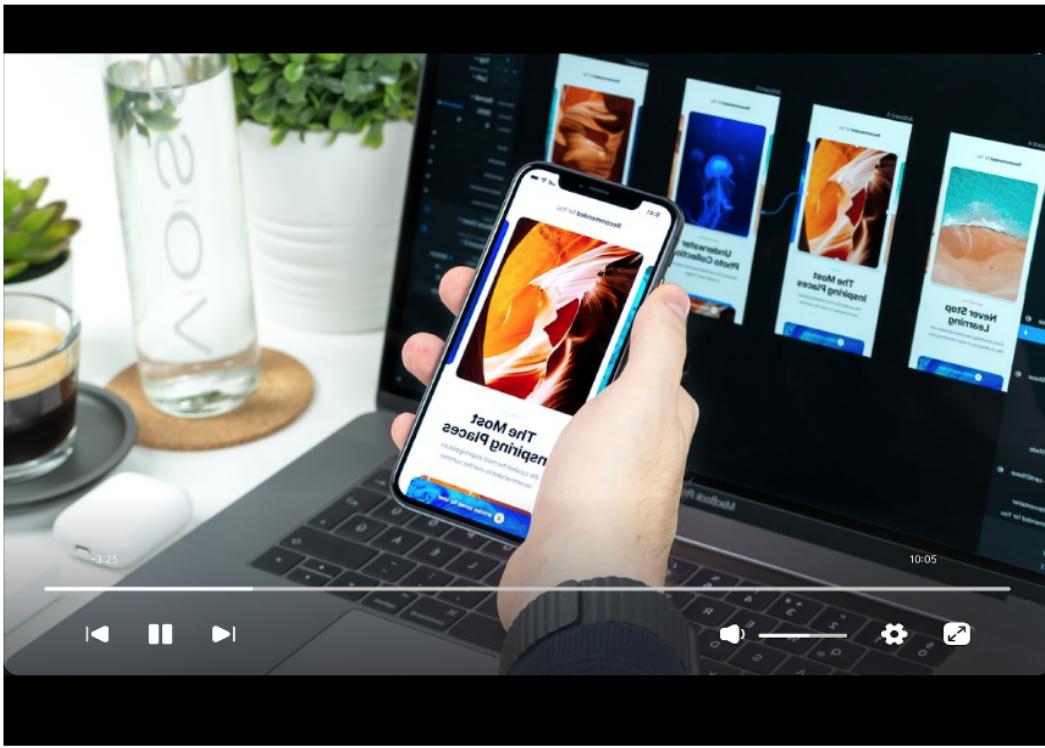

- My First UX Design Portfolio | Advice for Beginners (30K views, 3 days ago) by Darlene Robertson
- Learn Adobe Illustrator | Free Course (35K views, 6 days ago) by Everything Tech
- College Dropout Making \$500K as a Software Engineer (60K views, 5 days ago) by David White
- Life of Eleanor Pena (10K views, 1 week ago) by Eleanor Pena
- Learn Adobe Photoshop | Free Course (35K views, 6 days ago) by Everything Tech

- When a user clicks on any video, the system will switch to another interface to play the video (illustration). Here is the interface that is not logged in, can perform video playback as usual, but users cannot like the video or save the video to the favorites list.

The screenshot shows a video player interface. At the top, there's a navigation bar with a menu icon, a play button labeled 'VidNight', a search bar, and a user profile for 'Tobi Mojeed'. Below the video player, the main content area displays a video thumbnail for 'UI Design Trends 2021' by 'DesignSense'. The thumbnail shows a hand holding a smartphone displaying a UI design, with a laptop screen in the background showing multiple mobile device screens. The video has 1.2M views and was posted 2 hours ago. Below the thumbnail, there's a description: '2020 was very unpredictable as covid swept the world, and without exception, every industry was affected by it one way or another. In our trend collection, we highlighted only trends that solely focused on the looks of a user interface.' A note below states: 'So let's see a short recap on the most popular UI trends of 2020 that will continue to be the main defining elements in 2021.' To the right of the main video, there's a sidebar titled 'RELATED VIDEOS' featuring five recommended videos:

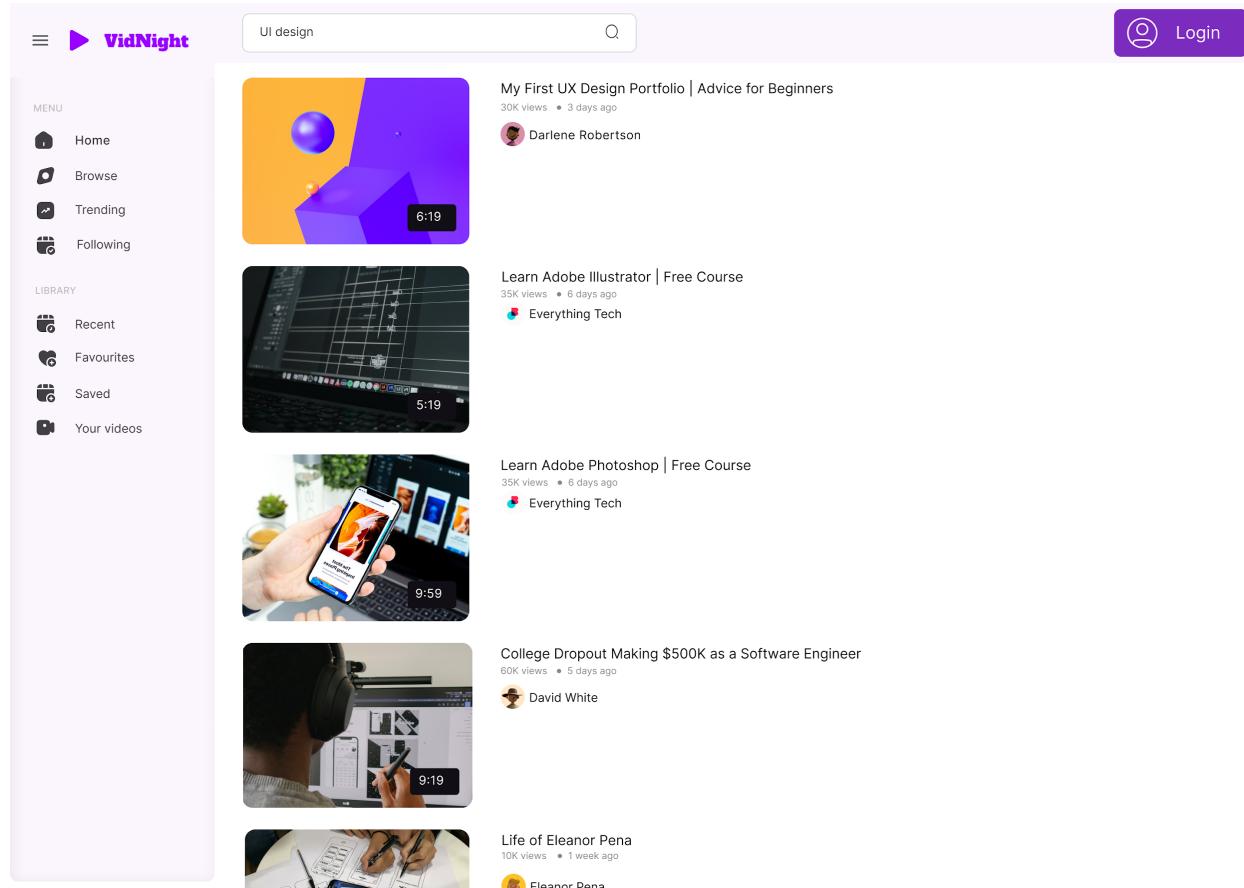

- My First UX Design Portfolio | Advice for Beginners** by Darlene Robertson (30K views, 3 days ago)
- Learn Adobe Illustrator | Free Course** by Everything Tech (35K views, 6 days ago)
- College Dropout Making \$500K as a Software Engineer** by David White (60K views, 5 days ago)
- Life of Eleanor Pena** by Eleanor Pena (10K views, 1 week ago)
- Learn Adobe Photoshop | Free Course** by Everything Tech (35K views, 6 days ago)

- This is the interface to watch videos when logged in. Users can perform additional operations such as following channels, like videos, etc.

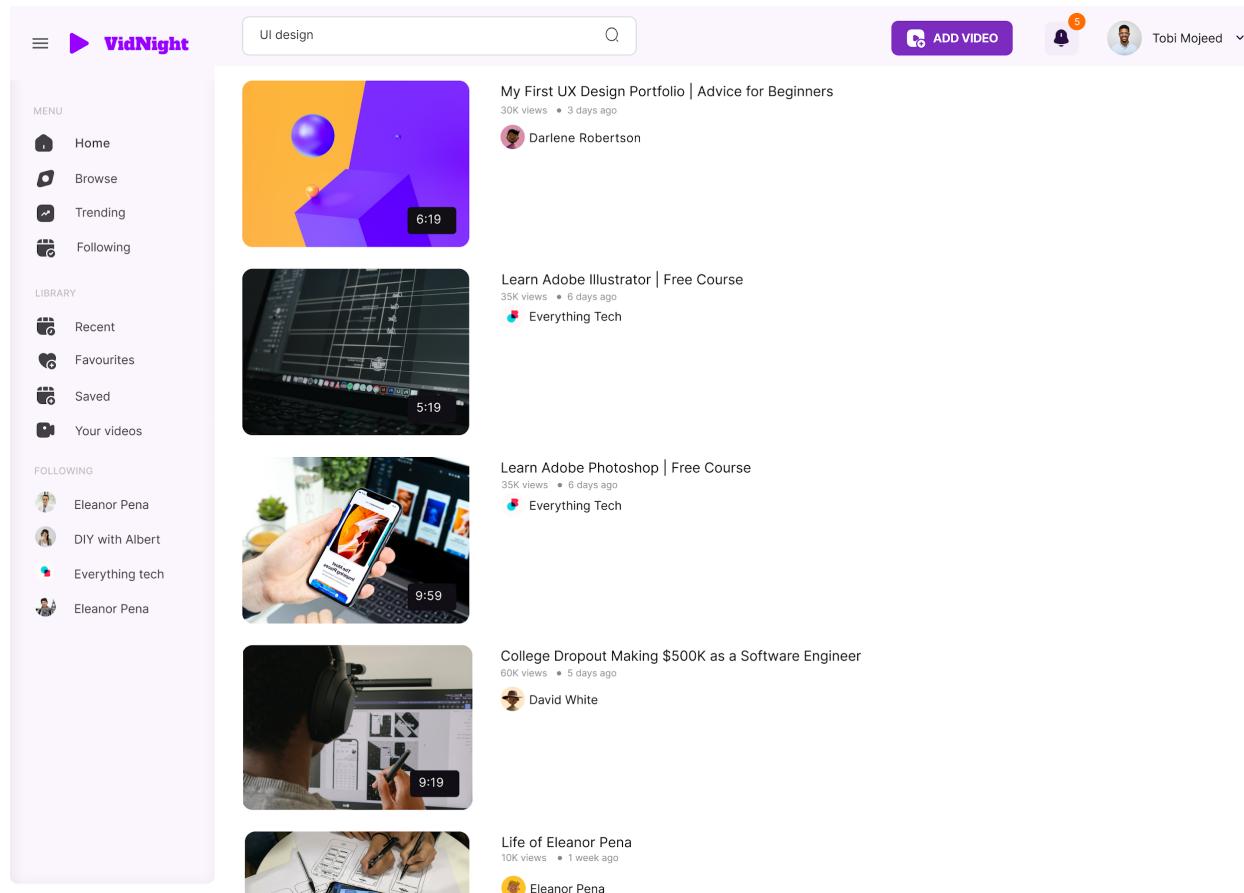

- This is what it looks like when watching videos in full-screen mode.

### 3. Search video

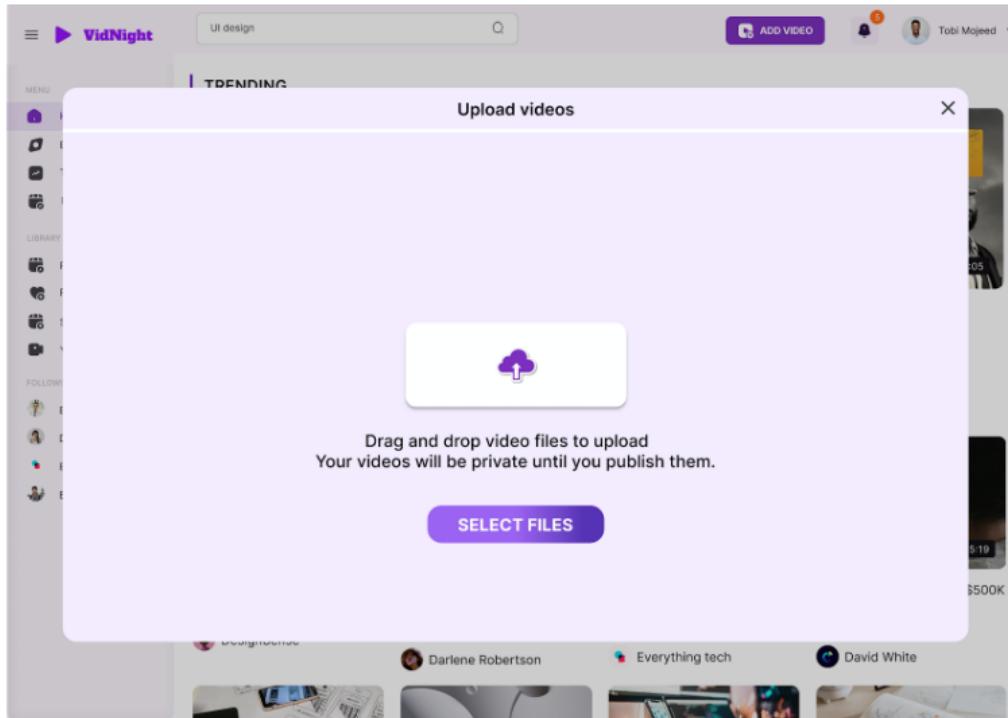

- When searching for a certain video, we enter related information in the search bar and then click search. The system will switch to an interface that displays the videos with the most relevant information in turn for the user (can be prioritized to display by popularity, last posted date, etc.)

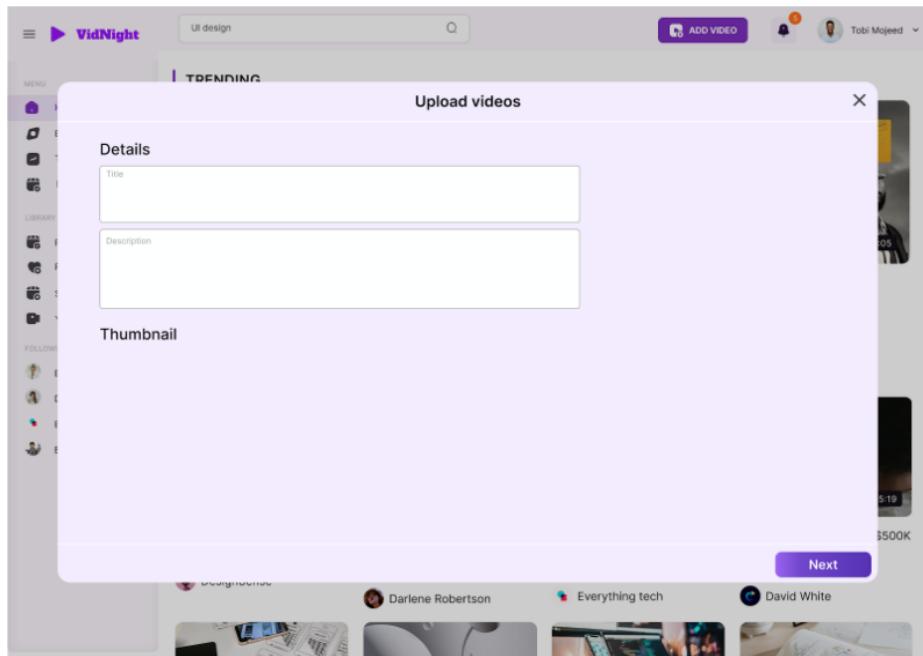

- In the interface when logged in, the search function is not much different, sometimes only prioritizing the channels users follow first.

#### 4. Post video

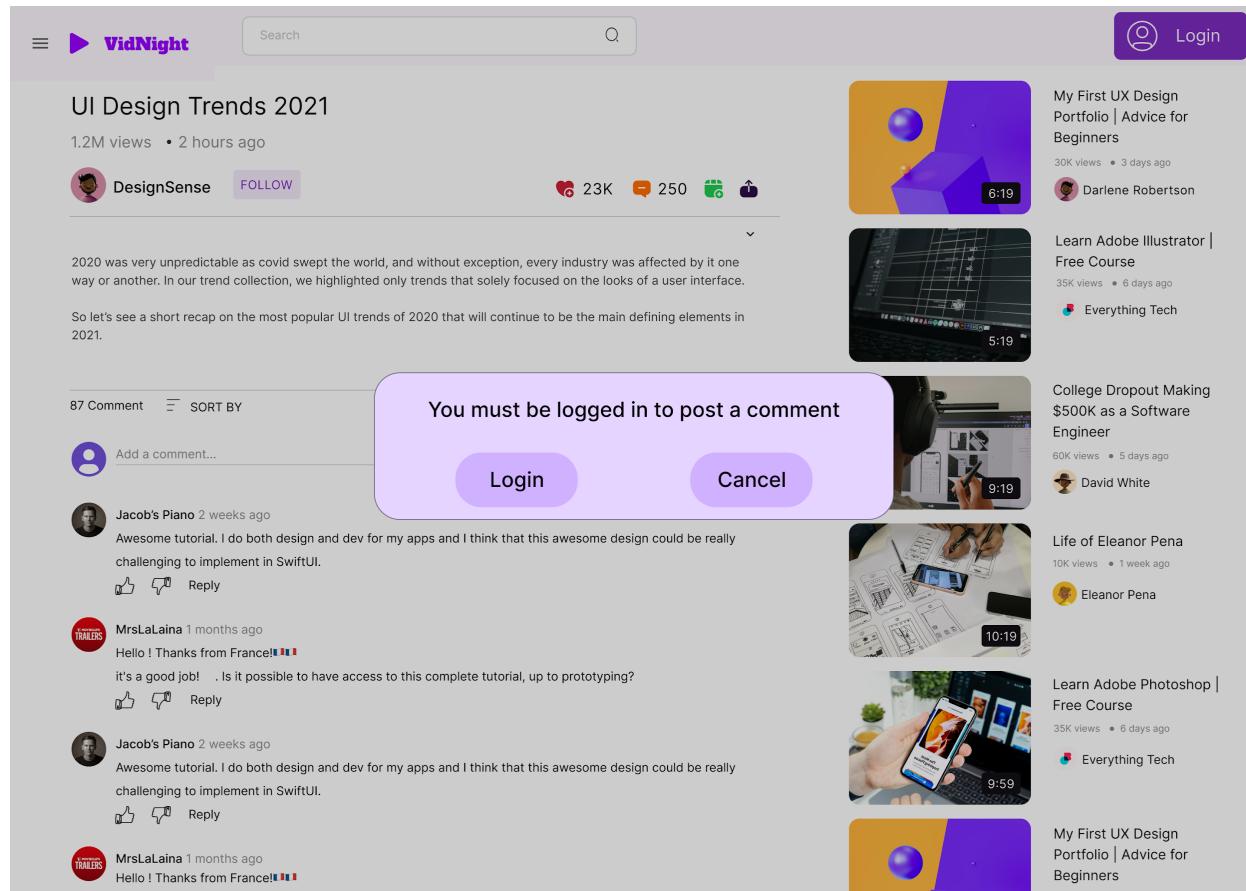

- The video posting function is only available after the user has logged in. After clicking on the Add Video icon, the system will display the interface as shown above. Now the user clicks Select files, then selects the video to post.

- Next, you will be asked to enter the title and description of the video information. Thumbnails can be selected by you or the system takes any moment in the video demonstration.

## 5. Video comment

- In the video player interface, scrolling down will have a comment section. This function requires the user to have an account, otherwise, the message will be displayed as shown above.

Awesome tutorial. I do both design and dev for my apps and I think that this awesome design could be really challenging to implement in SwiftUI.

Hello ! Thanks from France! 🇫🇷

it's a good job! . Is it possible to have access to this complete tutorial, up to prototyping?
